5. You Will be brought to "Download Product" page

6. Select Version 2103

Name:	VMware-Horizon-Client-2103-8.2.0-17759012.exe
Release Date:	2021-03-23
Build Number:	17759012

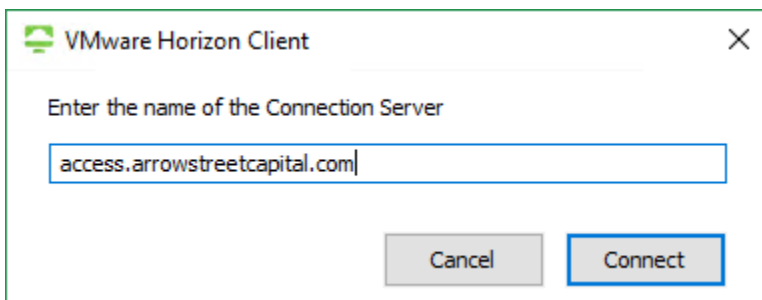

After download is complete run .exe and Agree & Install & Select Finish

Once the installation is complete, you will be prompted to restart your computer. Please reboot before continuing.

Once installed, launch the VMWare Horizon Client and select "Add Server" using the following server address.

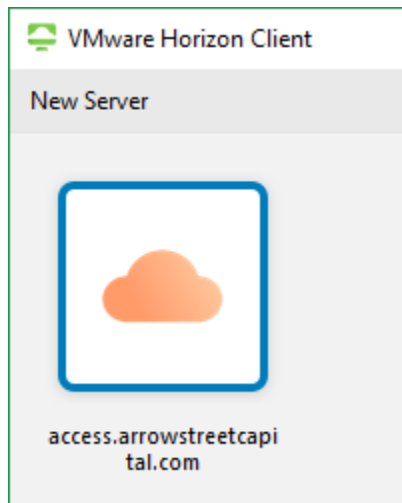

Server Address: access.arrowstreetcapital.com

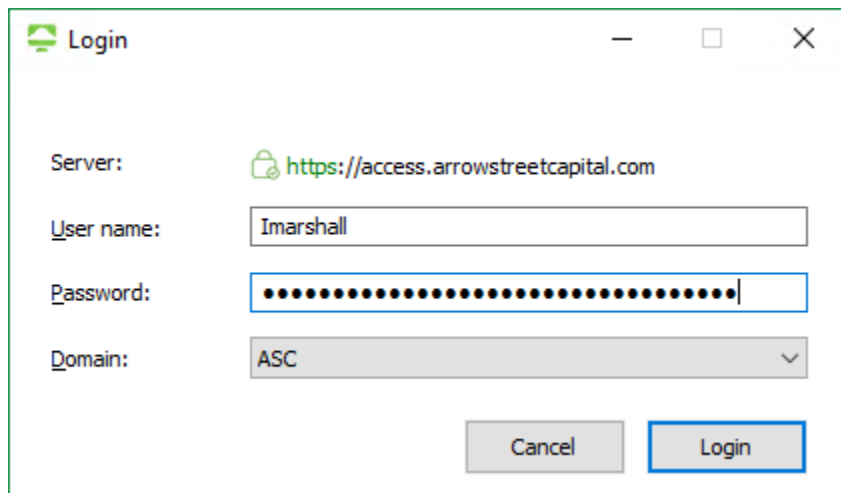

To log onto VDI, you will need to use your ASC domain username and password and **DUO** dual factor authentication to verify your connection.

Once DUO has been download and configured, the app can be used to approve your connections to VDI.

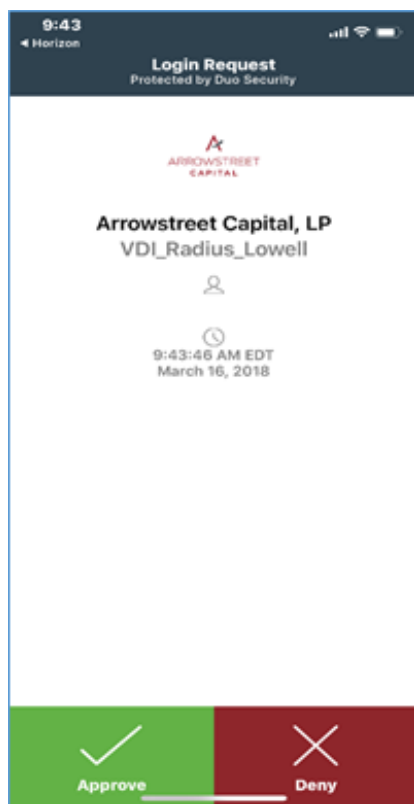

Launch the VMWare Horizon Client and click the available server.

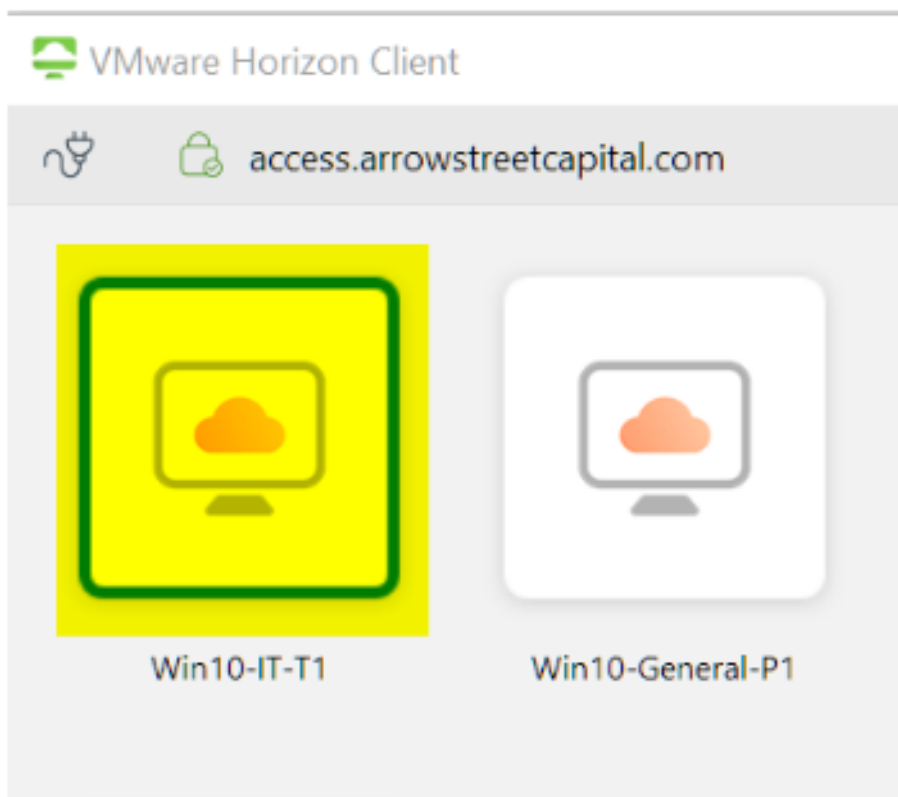

When prompted, enter your standard domain credentials. **PLEASE NOTE: If you are getting access denied immediately, you don't have a DUO account set up properly. Please call/email IT and provide them with your cell phone number to get this set up for you.**

Once you enter your username and password, you will need to open up DUO on your phone and approve the connection.

After you have authenticated and have been granted access, you will see a Windows 10 virtualized desktop option. Double click your VDI session.

You will now be presented with your VDI Session and can start working as you normally would.
